

Increase Your Warehouse Space at No Charge by Storing Roll Stock Outside

Yes, outside. In the rain, the snow, the sleet, the wind and the sun. With no swollen cores or ruined edges to bog down your production.

How? By protecting the top roll of every stack with a DuraShield™ brand roll stock cover from THOR. These woven reinforced, mesh-sided caps save you money two ways.

1 Permanent Storage at No Extra Charge

Now you can safely store your roll stock outside year round, whatever the weather. No need to build or rent more warehouse space. The tough woven reinforced cover keeps out rain and snow, protecting the critical core and edge.

Cover stays on even in the wind thanks to our unique mesh sides, form fit and your choice of drawstring, elastic or Velcro® fasteners.

2 Cut Down Shipping Bottlenecks

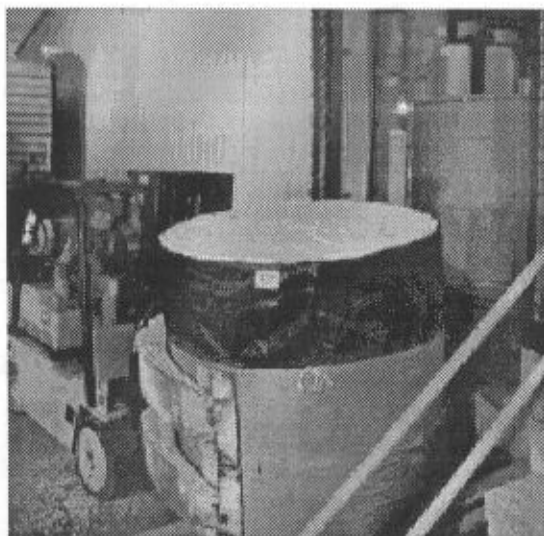

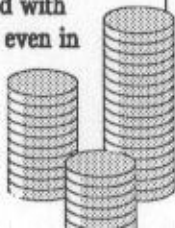

Increase your use of limited dock space by storing roll stock outside as you receive or produce it, and put it away during less busy shifts.

Top Dollar Protection for Only a Few Cents a Week

Even in the harshest weather, our rugged covers will last for years. So you only need to invest a few dollars once, then reuse and reuse them.

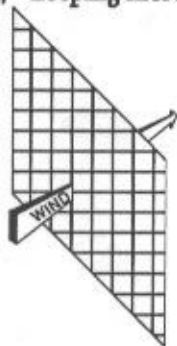

The DuraShield woven base is double-coated with abrasion resistant poly for tough, rip-stop strength in a surprisingly lightweight cover. Each is treated with UV light inhibitors, for long life even in constant sunlight.

If you save one roll of stock from water damage you have paid for a dozen covers!

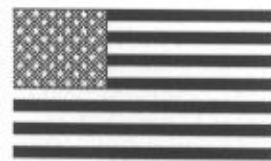

The Warp and Weft of THOR Covers

- 200# tear strength, so they are almost impossible to tear in normal use
- White or silver reflective top, to reduce moisture build-up underneath, keeping more rolls in production condition
- Mesh sides option lets wind pass through and not lift the cover off; available also with solid black side
- Choice of fasteners: drawstring (recommended), elastic or Velcro
- Available in any size
- Covers install in seconds cutting down the labor of homemade fixes

THOR

All of our covers and tarps are made with the highest quality, environmentally safe materials available to us. Both the reinforcing scrim and the coating on both sides is made with simple virgin polyethylene.

All our seams and finishing is done by heat sealing or sewing, with no adhesives to harm the air we breathe. Attractive appearance without the litter of homemade covers blowing around.

Perhaps most importantly, you can feel good that our covers are manufactured in the USA.
